Android emulator on windows virtual machine. Android virtual device manager windows 10. Download virtual android for windows 10. Windows virtual desktop android. Virtual android on windows 10. Android virtual device for windows 10. Android virtual machine windows 10. Windows virtual machine for android.

The latest Windows Insider update, build 15965 includes a virtual touchpad for tablets connected to monitors. "You can now drive content on a second display from your tablet without ever having to attach a mouse," Windows Insider chief Dona Sarkar wrote on the Windows blog. That means that if you want to work on a monitor from a tablet, you can expect precision touchpad controls no matter what device you're using. You just press on the taskbar and the "touchpad" will popup. Those who use Windows Ink for art may enjoy the feature, though it's probably a niche case for anyone else. Also in this update are enhancements for Sticky Note (including more languages, emails, URLs, phone numbers, and even stocks), as well as more options for Windows Ink. While many Microsoft services are available on Android and iOS, the look and feel of Windows Phone and Windows 10 Mobile is missed by many users. While there's no way to make an exact replicate of the now-dead mobile operating system, you can make your Android phone look like a Windows Phone in a few different ways. One option is to use a launcher designed to look like Windows 10 Mobile, but if you want complete customization and the ability to make your phone look like a miniature Windows 10 PC, you'll need to use multiple pieces of software. The customizable option was originally shared by Reddit user DrDisagree. The Live Wallpaper has quite a few steps and requires customization. If you want a simpler solution, scroll down to the guides for SquareHome 3 and Launcher 10. Install Nova Launcher from the Google Play Store. Install Nova Launcher Prime. Install KLWP. Install KLWP Pro. Install Pix Pie Icon pack. Download Windows 10 Wallpaper (or any wallpaper you'd like as a background). Make Nova Launcher your default launcher by opening settings, default apps, and selecting Nova Launcher. Open Nova Launcher's Settings. Select Home Screen. Select Dock. Toggle on/off switch to disable the dock. Clear any icons on your home screen by pressing and holding the icon and selecting remove or the x icon. Download KLWP Backup files from Google Drive. This process can vary depending on your Android device. Tap the ellipsis menu in the upper right-hand corner of the download screen. Select download. Once downloaded you should be taken to a screen with the option to import. Select import. Press **OK**. Open KLWP. Tap the hamburger menu. Select Load Preset. Tap the Exported tab. Tap the wallpaper within the tab labeled Windows X. Grant KLWP permissions by selecting Fix Now* and **Allow each time you are prompted to. Swipe the bottom of the screen to get to the Globals menu. Toggle navbar to on. Tap save icon at the top of KLWP. Select fix. Select Set as Wallpaper. Select Home screen. How to customize shortcuts The Live Wallpaper should now be running on your phone. Following these steps will create a copy of what DrDisagree made on Reddit. That means that all the shortcuts that were set up are intact. You can change any of these shortcuts in KLWP's menu. Tap the *Start button** in the lower left-hand corner of your home screen. Select KLWP. Tap any shortcut on the screen you'd like to change and select edit. How to customize the live wallpaper You can also change the look and icons of the wallpaper, though this can require quite a few steps depending on what you'd like to edit. Generally speaking, you can edit them through the menus on the bottom of KLWP. Make sure you're in the Items tab. Tap on the element you want to edit (toggling the check marks on and off will show which element you're editing). When finished making edits select the save icon. As an example, I used these steps to change the Gmail icon to an Outlook icon and changed the background of that square to blue. You can see the result above. How to add install a launcher that looks like Windows 10 Mobile Install Launcher 10 or SquareHome 3 from the Google Play Store. Set the launcher of your choice as the default home screen app on your phone. Our top equipment picks While nothing can exactly replicate Windows 10 Mobile, there are various options that come close to the look. The launchers are an easy option whereas the custom live wallpaper is complex but customizable. SquareHome 3 is a fan-favorite when it comes to replicating the look of Windows 10 Mobile. It supports transparent tiles, Lives Tiles, widgets, and more to give you a Windows feel on your Android device without much work. This setup takes multiple

paid apps and a thorough study of the interface of KLWP to get the look that you'd like. But the end result is a phone with a Start Menu clone that feels like a miniature PC in the palm of your hand. You need a few apps to complete this look, though KLWP is the main app that makes this setup possible. Additional EquipmentYou need a couple other apps to complete the custom wallpaper setup. Nova Launcher Prime (opens in new tab) (\$5 at Google Play)This highly customizable launcher is great for any Android setup and also allows the live wallpaper setup to work. Pixel Pie Icon Pack (opens in new tab) (\$2 at Google Play)This icon pack provides the rounded icons needed in the live wallpaper look and also looks great on other launchers. If you often open a lot of applications at once, a virtual desktop program can help you keep all those windows on your desktop organized. A virtual desktop program allows you to put open applications into separate virtual desktops, cutting down on your desktop clutter. We've collected links to and information about several free virtual desktop managers you can use to organize your Windows desktop. Dexpot Dexpot is a free (for personal use) virtual desktop manager that allows you to organize open programs on your desktop using up to 20 separate virtual desktops. You can set rules that determine on which desktops applications end up when launched. Each desktop can have its own wallpaper and screen resolution, as well. Navigation among the desktops is easy and Dexpot provides multiple ways to do this, including keyboard shortcuts, small thumbnails of your active desktops, and a full-screen preview of all desktops. You can also extend the functionality of Dexpot using plugins. For more information about using Dexpot, see our article. Yet another Desktop Manager 3D (Yod'm 3D) Yod'm 3D is a virtual desktop manager for Windows that offers a cube-style desktop switching feature. You can customize the background of the cube and the command used to rotate the cube and you can choose to run Yod'm 3D when Windows starts. Yod'm 3D does not need to be installed. Simply run the program and access the options from the system tray icon popup menu. Virtual Dimension Virtual Dimension is a free, fast virtual desktop manager for Windows with a lot of useful features. It allows you to have an unlimited number of desktops and to set different settings, such as wallpaper, desktop background color, and name, for each desktop. You can also move a window to a different desktop and have specific windows be available on all desktops. The hotkeys for operating the program are also customizable. Other useful features of Virtual Dimension include the ability to make any window be "always on top," minimize any window to the system tray, and the ability to use drag-and-drop to move a window to another desktop. VirtuaWin VirtuaWin is a free virtual desktop manager for Windows that allows you to organize your applications onto four virtual desktops, or "workspaces." It is highly customizable and extensible. VirtuaWin allows you to customize settings for each desktop separately, including the wallpaper and which icons on each desktop are enabled and disabled. You can also move windows to different desktops and select windows to always show on all desktops. VirtuaWin is extensible using their large library of plugins or modules, including one that allows you to track how much time you spend in each virtual desktop. This could be useful if you use a different desktop for each project you are working on. You can also download additional icon sets to replace the default taskbar icon set. VirtuaWin is also available in a portable version that allows you to easily use it on multiple computers. nSpaces nSpaces allows you to use multiple virtual desktops in Windows in which you can have different applications open. You can name each desktop; the names are shown on the space switcher. Each virtual desktop can have a custom wallpaper or background image and a password to protect your space. nSpaces has customizable hotkeys for each desktop you create. You can also drag and drop applications into each virtual desktop on the space switcher. Finestra Virtual Desktops Finestra is an easy-to-use virtual desktop manager for Windows that allows you to set up an unlimited number of desktops only limited by the amount of memory in your computer. The program uses thumbnail window previews in Windows 7 and Vista (Finestra also works in XP) to provide full-screen previews of all your desktops in the window manager/switcher. You can use the number keys on the number pad for up to 9 of your desktops, as well as hotkeys for sending windows to other desktops. Other useful features include multiple monitor support, a system tray icon with a menu containing items for every desktop, an option to have one system tray icon per desktop, sticky windows that display on all desktops, a different background in each desktop, and rules for locking programs onto desktops. Tri-Desk-A-Top Tri-Desk-A-Top is a free virtual desktop manager for Windows that provides three virtual desktops activated using system tray icons or pre-defined hotkeys. Each desktop can be accessed using a small, numbered icon on the system tray. You can also cycle through the desktops using hotkeys and move open application windows to different desktops. When you select a window on the currently active desktop, additional options are available, including Minimize, Maximize, Restore, Bring to Front, Close, and Kill. Tri-Desk-A-Top requires Microsoft .NET Framework 2.0 or later to install and run. If the .NET Framework is not installed on your computer, the installation process opens a browser to the Microsoft website where you can download and install it. The Tri-Desk-A-Top website provides additional information about available hotkeys for navigating and moving windows among the three desktops. mDesktop mDesktop is a lightweight virtual desktop manager for Windows that provides up to 10 virtual desktops to organize your open applications and folders. You can use hotkeys to navigate among the desktops, move windows among the desktops, and specify certain open programs or folders to be available on all desktops. It's a portable program that does not need to be installed. Simply run the program and right-click on the system tray icon to access the desktops and options for the program. You can also hide the system tray icon. For more information about using mDesktop, see our article. Xilisoft Multiple Desktops Xilisoft Multiple Desktops is a free virtual desktop manager for Windows that allows you to create up to nine multiple desktops and switch among them using customizable hotkeys, numbers keys, or mouse clicks. You can also arrange the desktops on a virtual screen and protect each desktop with a password. Screen-It Screen-It is a free, simple virtual desktop program for 32-bit Windows systems that allows you to have two virtual desktops to group your open programs. You can also launch programs automatically when Screen-It starts into a new virtual desktop using Screen-It's Job Maker tool. If you've found other useful virtual desktop programs, let us know.
